are applied transversely to the member AB. A P ave • The corresponding average shear stress is, • The resultant of the internal shear force distribution is defined as the shear of the section and is equal to the load P • Corresponding internal forces act in the plane of section C and are called shearing forces

Chapter 7. Torsional Loading: Shafts

• Torque applied to shaft produces shearing stresses on the faces perpendicular to the axis • The existence of the axial shear components is demonstrated by considering a shaft made up of axial slats. The slats slide with respect to each other when equal and opposite torques are applied ...
